

Civil Engineering Services

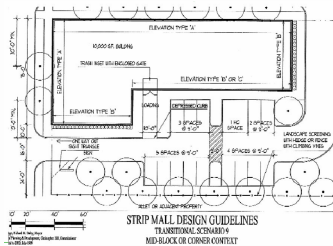

Ecological Restoration

Designing for Dynamic Locations

Town Builder Studios offers expertise in civil and stormwater engineering. Our civil engineers use their understanding of site grading and pavement design to offer solutions that maximize topographic and sub-surface conditions. They commonly collaborate with our landscape architecture team. Our professionals emphasize sustainable design through the creation of memorable outdoor spaces, accessible walks, and road and parking facilities.

Our civil engineers are proficient in stormwater management. They understand that every project's stormwater systems are dynamic, living, and ever-changing.

Town Builder Studios produces efficient site developments with sensitivities to local codes, regulatory agencies, and permits. We critically consider accessibility, for example, for all people regardless of ability as defined by the Americans with Disabilities Act.

Final Plans and Permitting

Services Include:

- Civil Engineering
- Watershed Planning & Management
- Drainage Design & Analysis
- Flood Mitigation
- Regulatory Compliance
- Water Quality
- Construction Oversight
- Street Beautification

Transit, Traffic, and Parking

Planting and Paving Design
