

Landscape Architectural Services

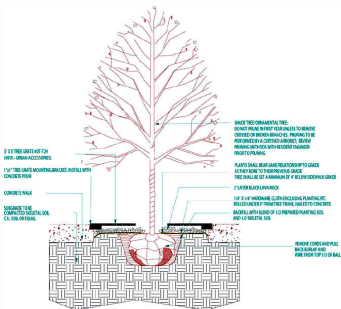

Planting Design

Sculpting Meaningful Outdoor Spaces

Town Builder Studios creates distinctive and memorable experiences through landscape architecture. From small public spaces to large-scale developments, we bring creativity and flair to outdoor spaces. Our approach to planning and design emphasizes landscape architecture as an essential tool, used hand-in-hand with architecture, to improve quality of life. We push landscape architecture beyond site boundaries to include the larger community.

Town Builder Studios approaches historic and social contexts with sensitivity while simultaneously making ecologically sustainable decisions. Successful landscape design solutions are created through thorough understandings of site layout, ecological processes, storm water management, and aesthetics of planting and paving design.

Our landscape architects collaborate with our inter-disciplinary team and host public reviews to ensure that all aspects harmonize to create a final plan well accepted by the community.
